REGULAR PAPERS

Statistical Signal Processing

Distributed Detection Over Adaptive Networks Using Diffusion Adaptation .................................. F. S. Cattivelli and A. H. Sayed 1917
Hidden Relationships: Bayesian Estimation With Partial Knowledge ........................................... T. Michaeli and Y. C. Eldar 1933
Vector ** Sparse Variable PCA ............................................................... M. O. Ulfarsson and V. Solo 1949

Adaptive Signal Processing

Pseudo Affine Projection Algorithms Revisited: Robustness and Stability Analysis ....................... M. Rupp 2017
New Algorithms for Adaptive Notch Smoothing ................................................................. M. Niedźwiecki and M. Meller 2024
Modeling Bird Flight Formations Using Diffusion Adaptation .............................................. F. S. Cattivelli and A. H. Sayed 2038

Digital and Multirate Signal Processing

Memory Efficient Modular VLSI Architecture for Highthroughput and Low-Latency Implementation of Multilevel Lifting 2-D DWT .......................................................... B. K. Mohanty and P. K. Meher 2072
U-Invariant Sampling: Extrapolation and Causal Interpolation From Generalized Samples ........ T. Michaeli, V. Pohl, and Y. C. Eldar 2085
Sampling of Deterministic Signals and Systems ................................................................. H. Boche and U. J. Mönich 2101
Bayesian Post-Processing Methods for Jitter Mitigation in Sampling ....................................... D. S. Weller and V. K Goyal 2112
Closed-Form Orthogonal Number Theoretic Transform Eigenvectors and the Fast Fractional NTT .............................................................. S.-C. Pei, C.-C. Wen, and J.-J. Ding 2124

Nonlinear Signal Processing

Identification of a Class of Nonlinear Autoregressive Models With Exogenous Inputs Based on Kernel Machines ................................................................. G. Li, C. Wen, W. X. Zheng, and Y. Chen 2146
Covariance Matrices for Second-Order Vector Random Fields in Space and Time ....................... C. Ma 2160

(Contents Continued on Back Cover)
